TABLE OF CONTENTS

Acknowledgements 1

Introduction 3

Section A—Call to Action

ICM/FIGO Joint Statement—Management of the Third Stage of Labour to Prevent Post-partum Haemorrhage..... A-1

ICM/FIGO Global Initiative on the Prevention of Post-partum Haemorrhage—Ten Key Actions..... A-3

ICM Background Paper..... A-4

Section B—Evidence Base for Active Management of the Third Stage of Labor

Introduction..... B-1

Summary of the Evidence Base for Active Management of the Third Stage of Labor B-1

The Bristol third stage trial: active versus physiological management of third stage of labour..... B-5

Active versus expectant management of third stage of labour: the Hinchingsbrooke randomised controlled trial..... B-11

Active versus expectant management in the third stage of labour..... B-19

Prophylactic use of oxytocin in the third stage of labour B-47

Prophylactic ergometrine-oxytocin versus oxytocin for the third stage of labour B-99

Postpartum haemorrhage in Zimbabwe: a risk factor analysis B-131

Preventing postpartum hemorrhage in low-resource settings..... B-139

WHO multicentre randomised trial of misoprostol in the management of the third stage of labour..... B-149

Prostaglandins for prevention of postpartum haemorrhage B-157

Early suckling and postpartum haemorrhage: Controlled trial in deliveries by traditional birth attendants B-263

WHO/UNICEF Guidance on Management of the Third Stage of Labor and Timing of Cord Clamping: Are we throwing the baby out with the bathwater?..... B-267

Controlled cord traction versus minimal intervention techniques in delivery of the placenta: A randomized controlled trial..... B-283

Prevention and Treatment of Postpartum Hemorrhage: New Advances for Low-Resource Settings B-289

Section C—Clinical Care and Treatment

Guidelines for Prevention of Postpartum Hemorrhage

Introduction C-1
Emergency Obstetric Care—Vaginal Bleeding After Childbirth C-3
Active Management of Third Stage Labor: A Tutorial and Presentation Slides..... C-9
Training Materials..... C-22

Section D—Drugs for Active Management of the Third Stage of Labor

Introduction D-1
Stability of injectible oxytocics in tropical climates..... D-3
Stability of oral oxytocics in tropical climates D-53
Misoprotol for Prevention of Postpartum Hemorrhage D-85
Prevention of Postpartum Hemorrhage: Drug Management Issues in the
Active Management of the Third Stage of Labor D-115

Section E—Media Tools

ACKNOWLEDGEMENTS

This toolkit was compiled and prepared by Program for Appropriate Technology for Health (PATH), under the United States Agency for International Development (USAID) funded Maternal Neonatal Health Project. The MNH Program is committed to saving mothers' lives by increasing the timely use of key maternal and neonatal health and nutrition practices. The MNH Program is jointly implemented by JHPIEGO, the Johns Hopkins University Center for Communication Programs, the Centre for Development and Population Activities, and PATH.

Cover photo: Mary Linehan

CD-ROM— Editor: Rebecca Chase

Animator and Designer: Matthew Czapanskiy

Illustrator: Kimberly Battista

The CD-ROM that accompanies this document, *Active Management of the Third Stage of Labor: A Demonstration*, is an integral part of the toolkit. This 12-minute narrated presentation provides a concise overview active management of third stage of labor and demonstrates the steps of the procedure using illustrations and animated sequences. Aimed at both clinical and nonclinical audiences, the presentation is suitable for use as a general information/advocacy piece as well as a learning tool/tutorial. Additional information about the CD-ROM is included on the CD-ROM itself.

Special Thanks

We would like to thank all of the people who reviewed the document and/or CD-ROM at various stages or provided other technical assistance: Eltahir Abdelhadi, Deborah Armbruster, Rebecca Chase, Colleen Conroy, Willow Gerber, Jane Goett, Patricia Gomez, Kathy Herschderfer, Lily Kak, Barbara Kinzie, Patricia Klosky, Katherine Krasovec, Andre LaLonde, James Litch, Melissa McCormick, Gloria Metcalfe, Rebeca Quiroga, Mary Ellen Stanton, Patricia Stephenson, Suzanne Thomas, Jorge Tolosa, and Anne Wilson.

INTRODUCTION

In 2003, the International Federation of Gynecology and Obstetrics (FIGO) and the International Confederation of Midwives (ICM) issued a joint statement that has prioritized universal access to active management of the third stage of labor to respond to the urgent need to make real progress in reducing maternal mortality globally.

This toolkit is designed to provide useful, practical information and materials for health providers so that they can prevent postpartum hemorrhage through active management of the third stage of labor and advocate for necessary policy change to assure that active management of the third stage of labor is available to all pregnant women. The toolkit is not intended to be a comprehensive source for all materials related to prevention of postpartum hemorrhage, but rather focuses on selected tools that may be most useful to providers.

The toolkit is comprised of two separate documents:

1. This library reference document for midwifery, obstetric and gynecological and other professional and training associations, universities, Ministry of Health resource centers, and other centralized reference centers that provide support to maternal health providers and distribute professional information to members. This document is designed with the view that as additional research findings become available, updates and additional information can be sent out to supplement the original binder copy.
2. A spiral bound condensed version for skilled providers in and out of facilities providing selected essential, practical materials for adopting interventions for prevention, management, and treatment of postpartum hemorrhage, and references to the additional materials available in the library reference document.

The library reference version of the toolkit intends to provide both scientific evidence as well as specific guidance on how to practice active management of the third stage of labor, and includes:

- The joint statement of ICM and FIGO
- Selected materials on the scientific evidence for active management of the third stage of labor, including key articles and references, and a PowerPoint presentation summarizing the evidence
- Step-by-step description of the ICM and FIGO approved clinical care standards for active management of the third stage of labor
- Information on the drugs that can be used for active management of the third stage of labor
- A collection of briefing materials for media
- “Active Management of the Third Stage of Labor: A Demonstration”—a CD-ROM of a 12-minute narrated presentation that defines and briefly explains the importance of active management and demonstrates the steps of the procedure, using illustrations and animation to depict the procedure
- A laminated job aid for practicing active management of the third stage of labor
